Juniata street from Chestnut to the bridge east of town, is one of the most impassable streets in the State of Kansas, whenever it rains. In the first place it is graded too high in the center and cars passing slip off the grade into the ditch—the car stalls which causes more or less profanity from the autoists. When the road dries up the "hog back" in the center causes cars to tip over "side-wise." The county grader, in half a day, could level off the road, ditch the sides properly and make of it a desirable road. However, paving would be the proper "caper." That would settle the whole question.
